

Streamline your field surveys with Trimble Catalyst

Trimble Catalyst is a revolutionary GNSS positioning-as-a-service solution that transforms your device into a powerful, centimeter-accurate mapping, navigation, and measurement tool.

Together with the Trimble DA2 GNSS receiver, Catalyst works seamlessly with the MALÅ Controller App. Mounted on the MALÅ Easy Locator Core, you get precise, on-demand GNSS positioning for your GPR surveys.

Ready to upgrade your field surveys? Get the DA2 GNSS receiver and 10 hours of Catalyst positioning service with 1 cm accuracy – free when purchasing the MALÅ Easy Locator Core in EMEA. Offer ends December 31.

The offer includes:

Trimble Catalyst, 10-hour free connection time

The 1 cm accuracy subscription is perfect for projects that demand high-precision, such as boundary surveys, establishing control points, and verifying as-built conditions of buried utilities.

Trimble DA2 GNSS receiver and batteries

Designed for the Trimble Catalyst positioning service, the Trimble DA2 receiver delivers high-accuracy positions with reliable performance near trees and buildings. Wirelessly connect the receiver to your Android tablet, launch the MALÅ Controller App, sign in to Catalyst and get started.
